

Moch. Nasheh Annafii

LECTURER CANDIDATE IN INFORMATICS · MACHINE LEARNING & DIGITAL TWIN RESEARCHER

No. 141, Jl. H. Ilang, Cimanggis, Depok, West Java, Indonesia

☎ (+62) 852-1937-0971 | ✉ nashehannafii@gmail.com | 🏠 nashehannafii.github.io | 📧 nashehannafii | 📄 nashehannafii | 🎓 Moch. Nasheh Annafii

“Advancing intelligent systems and digital twin technologies through machine learning, computer vision, and data-driven modeling for real-world impact.”

Education

Universitas Ahmad Dahlan

Yogyakarta, Indonesia

MASTER OF INFORMATICS (M.KOM.)

2024 – 2026

- Thesis: “Data Modeling on Cardio-Human Digital Twin Referring to the Five-Dimensional Digital Twin Concept.”
- Research focus on Human Digital Twin, Data Engineering, and Healthcare Data Modeling.

Universitas Darussalam Gontor

Ponorogo, Indonesia

BACHELOR OF INFORMATICS (S.KOM.)

2019 – 2022

- Major in Informatics Engineering.
- Academic research focused on Deep Learning.

Skills

Machine Learning & Deep Learning

CNN, Transfer Learning (MobileNetV2), Image Classification, Model Evaluation & Optimization

Digital Twin

Digital Twin Concept, Digital Twin Modeling, Data-Driven Concept.

Programming Languages

Python, PHP, JavaScript, LaTeX, etc.

Frameworks & Tools

Yii2, Laravel, CodeIgniter, TensorFlow/Keras, Git, Linux, AWS S3, GCP, etc.

Languages

Bahasa, English, Arabic

Experience

Academic Research Projects

Indonesia

RESEARCHER – HUMAN DIGITAL TWIN, MACHINE LEARNING, AND DATA ENGINEERING

2024 – Present

- Conducted research on Human Digital Twin modeling for cardiovascular systems by integrating geometric modeling, physical simulation, and data-driven machine learning approaches.
- Designed data architecture and ELT-based data management pipelines for healthcare-oriented Digital Twin systems.
- Published research articles in accredited national journals in the fields of Artificial Intelligence and Informatics.

Universitas Darussalam Gontor

Indonesia

LECTURER ASSISTANT – ARTIFICIAL INTELLIGENCE AND COMPUTING COURSES

2020 – 2022

- Assisted in teaching Database Systems (I & II), Human Computer Interaction, Digital Image Processing, and Machine Learning courses.
- Guided students in laboratory sessions, practical assignments, and project-based learning activities.
- Supervised student projects involving database design, image processing algorithms, and machine learning model implementation.
- Contributed to curriculum support materials and assessment preparation.

Universitas Darussalam Gontor / Professional Projects

Indonesia

WEB DEVELOPER

2021 – Present

- Developed and maintained web-based information systems using PHP (Yii2), JavaScript, and MySQL.
- Designed scalable backend systems and implemented role-based access control mechanisms.
- Optimized relational database schemas and complex SQL queries for performance efficiency.
- Managed Linux-based server environments (Ubuntu) including deployment, configuration, and system maintenance.
- Integrated cloud storage services and supported institutional digital infrastructure.

Universitas Darussalam Gontor

Indonesia

IT INFRASTRUCTURE AND NETWORKING STAFF

2020 – 2021

- Maintained campus-wide WiFi and network infrastructure ensuring reliability and performance.
- Performed network troubleshooting, monitoring, and system optimization.
- Supported institutional digital services and infrastructure operations.

Presentation

International Conference on Computer Engineering, Network and Intelligent Multimedia

Surabaya, Indonesia

PRESENTER & CO-AUTHOR FOR CENIM 2020

2020

- Presented research on semantic segmentation using optimized U-Net at an IEEE-supported international conference.
- Collaborated with multiple authors from the Department of Informatics, Universitas Darussalam Gontor.
- Explored advanced deep learning techniques for precision agriculture and computer vision applications.

Seminar Nasional Sains dan Teknologi (SNST FT Universitas Wahid Hasyim)

Semarang, Indonesia

PRESENTER & AUTHOR

2022

- Presented research on deep learning based semantic segmentation using UNet with hyperparameter optimization at SNST 2022.
- Published in the seminar proceedings (indexed SNST FT Unwahas).

Publications

Implementasi Teknologi Artificial Intelligence untuk Interdisipliner Ilmu

Book

BOOK CHAPTER – CO-AUTHOR

2025

- Contributed as a co-author to a comprehensive reference book on the implementation of Artificial Intelligence across interdisciplinary domains.
- Chapters cover topics such as semantic segmentation in image processing, AI in healthcare, AI ethics and privacy, and other cross-disciplinary AI applications.
- ISBN: 978-623-02-9962-9. Published by Deepublish, Indonesia.

Semantic Segmentation of Rice Leaf Blast Disease using Optimized U-Net

Proceeding Paper Article

CONFERENCE PAPER – PRESENTER & CO-AUTHOR

2020

- Presented and co-authored a research paper on semantic segmentation using an optimized U-Net architecture.
- Proposed deep learning-based approach for agricultural disease detection.
- Published in IEEE-supported international conference proceedings.

Human Digital Twin Modeling for Cardiovascular System

National Journal Article

JOURNAL ARTICLE

2025

- Developed human digital twin framework integrating geometric, physical, and machine learning models.
- Focused on cardiovascular system simulation for healthcare applications.
- Published in nationally accredited journal indexed in academic databases.

Classification of Rice Leaf Blast Severity using MobileNetV2

National Journal Article

RESEARCH ARTICLE – CO-AUTHOR

2022

- Implemented transfer learning using MobileNetV2 for plant disease severity classification.
- Conducted model evaluation and comparative performance analysis.
